## Contents

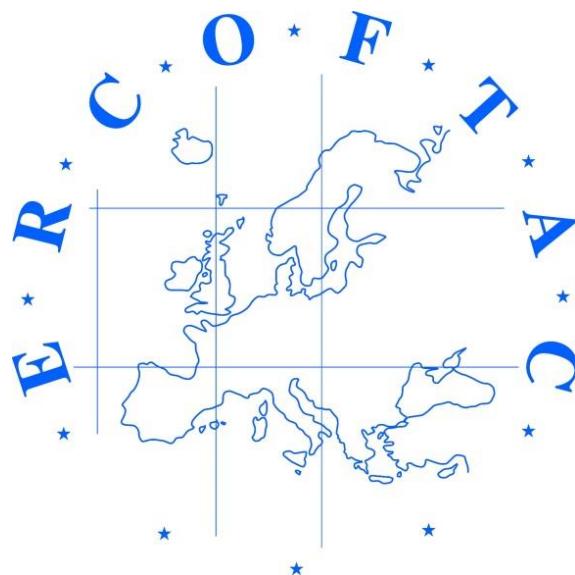

<b>1</b>	<b>Introduction to turbulent combustion modeling</b>	11
1.1	Background and challenges . . . . .	12
1.2	Major length and time scales . . . . .	13
1.3	Generic scalar balance equation . . . . .	14
1.3.1	Eddy viscosity - RANS & LES . . . . .	15
1.4	Modeling review . . . . .	16
1.4.1	Fixed flame structure . . . . .	17
1.4.2	Micro-mixing modeling . . . . .	20
1.4.3	LES-specialized turbulent combustion modeling . . . . .	24
1.5	Conclusion . . . . .	26
<b>2</b>	<b>Combustion Chemistry</b>	39
2.1	Introduction . . . . .	39
2.2	Chemical Source Terms . . . . .	40
2.2.1	Need for source terms . . . . .	40
2.2.2	Rate laws . . . . .	41
2.2.3	Rate laws for elementary reactions . . . . .	41
2.3	Combustion Kinetics . . . . .	43
2.3.1	Formation of Radicals . . . . .	43
2.3.2	Fuel oxidation . . . . .	44
2.4	Time Scales of Chemical kinetics . . . . .	45
2.5	Detailed Reaction Mechanisms . . . . .	46
2.5.1	State of the art . . . . .	46
2.5.2	Different strategies for the mechanism development . . . . .	47
2.5.3	Different strategies for optimization . . . . .	48
2.5.4	Available Detailed Mechanisms . . . . .	48
2.5.5	Implementation . . . . .	49
2.5.6	General remarks . . . . .	50
2.6	Skeleton Mechanisms . . . . .	50
2.6.1	Construction of skeleton mechanisms based on intuition . . . . .	51
2.6.2	Mathematical analysis . . . . .	51

2.6.3	General remarks . . . . .	52
2.6.4	Adaptive Chemistry . . . . .	52
2.7	Principles of Reduced Kinetic Models . . . . .	53
2.8	Knowledge Based Model Reduction . . . . .	53
2.8.1	Methods for Analysis . . . . .	53
2.8.2	Implementation of steady state and partial equilibrium assumptions . . . . .	55
2.9	Manifold Methods . . . . .	55
2.9.1	Principles of Manifold Methods . . . . .	55
2.9.2	Identification of Low-Dimensional Manifolds . . . . .	55
2.10	Global Mechanisms . . . . .	59
2.11	Tabulation Strategies . . . . .	60
2.12	Implementation of reduced schemes . . . . .	61
2.13	Conclusions . . . . .	63
<b>3</b>	<b>Thermal Radiation</b> . . . . .	<b>77</b>
3.1	Radiative Heat Transfer in Combustion Systems . . . . .	77
3.1.1	Radiative transfer equation . . . . .	77
3.1.2	Absorptivity, emissivity, transmissivity . . . . .	80
3.1.3	Radiative heat flux and radiative source term . . . . .	82
3.2	Solution Methods for Thermal Radiation . . . . .	83
3.2.1	Optically thin approximation . . . . .	83
3.2.2	Optically thick approximation . . . . .	84
3.2.3	Spherical harmonics method . . . . .	84
3.2.4	Discrete transfer method (DTM) . . . . .	86
3.2.5	Discrete ordinates method (DOM) . . . . .	87
3.2.6	Finite volume method (FVM) . . . . .	89
3.2.7	Monte Carlo method . . . . .	90
3.2.8	Other solution methods . . . . .	91
3.3	Radiative Properties of Gases . . . . .	91
3.3.1	Line-by-line model . . . . .	92
3.3.2	Narrow band models . . . . .	93
3.3.3	Wide band models . . . . .	95
3.3.4	Correlated $k$ -distribution method . . . . .	96
3.3.5	Global models . . . . .	97
3.3.6	Total gas radiative properties . . . . .	99
3.3.7	Other gas property models . . . . .	100
3.4	Radiative Properties of Particles . . . . .	100
3.4.1	Radiative properties of soot particles . . . . .	102
3.4.2	Radiative properties of coal particles . . . . .	102
3.4.3	Radiative properties of biomass particles . . . . .	104
3.4.4	Radiative properties of droplets . . . . .	104

3.4.5	Radiative properties of porous media . . . . .	105
3.5	Turbulence-Radiation Interaction . . . . .	105
3.6	Computational Implementation of Radiation Models . . . . .	107
3.7	Summary of Guidelines . . . . .	111
3.7.1	Selection of the radiation model and RTE solution method . . . . .	111
3.7.2	Selection of the radiative properties model . . . . .	113
3.7.3	Computational implementation . . . . .	115
3.8	Examples of Validation Studies and Applications . . . . .	117
3.8.1	Example 1: Comparison of radiative transfer models . . . . .	117
3.8.2	Example 2: Comparison of spectral models . . . . .	121
3.8.3	Example 3: Application to a laboratory combustor (BERL furnace) . . . . .	124
3.8.4	Example 4: Application to MILD combustion . . . . .	127
<b>4</b>	<b>RANS and LES validation</b> . . . . .	<b>145</b>
4.1	Reacting versus non-reacting CFD validation . . . . .	145
4.1.1	Why validate a CFD code ? . . . . .	145
4.1.2	Validation of <i>Combusion CFD</i> codes . . . . .	146
4.1.3	Steps in a CCFD validation process . . . . .	148
4.1.4	Analysis of CCFD validation simulations . . . . .	150
4.1.5	Differences in CCFD validation for RANS and LES codes . . . . .	152
4.2	Non premixed validation flames . . . . .	152
4.2.1	Combustion physics . . . . .	152
4.2.2	Overview of some available validation flames . . . . .	153
4.2.3	Piloted Jet Flames . . . . .	154
4.2.4	Bluff-Body Flame . . . . .	159
4.2.5	Conclusions and best practice guidelines non premixed flames . . . . .	163
4.3	Fully premixed validation flames . . . . .	165
4.3.1	Combustion Physics and Remarks for Usability as Validation Flames . . . . .	165
4.3.2	Premixed Turbulent Validation Flames . . . . .	166
4.3.3	Atmospheric 48 mm Bunsen Flames from Erlangen . . . . .	167
4.3.4	High Pressure Bunsen Flames from Orléans . . . . .	171
4.3.5	Large Sudden Expansion Combustor from PSI . . . . .	173
4.3.6	Conclusions and best practice guidelines for premixed turbulent flames . . . . .	177
4.4	Partially premixed / stratified validation flames . . . . .	180
4.4.1	Combustion physics . . . . .	180
4.4.2	Overview over validation flames . . . . .	181
4.4.3	Swirl burner (TECFLAM) . . . . .	182
4.4.4	Stratified burner . . . . .	188
4.4.5	Conclusions and best practice guidelines for partially premixed flames . . . . .	192
4.5	General conclusions . . . . .	193

<b>5 Internal Combustion Engine</b>	<b>203</b>
5.1 Introduction . . . . .	203
5.1.1 Generalities . . . . .	204
5.1.2 Engine Typologies and Technology Trends . . . . .	205
5.1.3 Structure of this Chapter . . . . .	209
5.2 On Turbulent Flow Modelling in IC Engines . . . . .	210
5.2.1 Large Eddy Simulation for ICE . . . . .	211
5.2.2 Hybrid URANS/LES and their Applications in IC Engines . . . . .	213
5.2.3 Numerical Methods, Quality Assessment and Postprocessing . . . . .	222
5.2.4 Best Practice Guidelines . . . . .	230
5.3 Spray Description, Atomization and Modelling . . . . .	231
5.3.1 Generalities . . . . .	231
5.3.2 Spray Description . . . . .	231
5.3.3 Spray Atomization Models . . . . .	233
5.3.4 Single Component Spray Modeling . . . . .	240
5.3.5 Best Practice Guidelines . . . . .	252
5.4 Multicomponent Droplet Evaporation . . . . .	256
5.4.1 Introduction and Outline . . . . .	256
5.4.2 Review of Modeling Approaches . . . . .	257
5.4.3 Model Formulation . . . . .	259
5.4.4 Application Examples . . . . .	262
5.4.5 Best Practice Guidelines . . . . .	272
5.5 Ignition Process and Combustion Models . . . . .	272
5.5.1 Ignition Process . . . . .	272
5.5.2 Combustion Models . . . . .	280
5.5.3 Best Practice Guidelines . . . . .	287
5.6 Best Practice for Combustion LES and HLR . . . . .	287
5.6.1 Choice of Models . . . . .	288
5.6.2 Choice of Mesh . . . . .	288
5.6.3 Choice of Discretisation Scheme . . . . .	289
5.6.4 Choice of Time Step . . . . .	289
5.6.5 Statistics and Required Number of Engine Cycles . . . . .	290
5.7 Validation and Concluding Remarks . . . . .	290
<b>6 Gas-Turbines</b>	<b>311</b>
6.1 Introduction . . . . .	311
6.2 Modeling and computational issues . . . . .	312
6.2.1 Combustor components . . . . .	312
6.2.2 Turbulent combustion modeling . . . . .	317
6.2.3 Modeling versus computing power . . . . .	319
6.3 Pre-requisites for efficient CFD case studies . . . . .	322

<b>9</b>	
<b>CONTENTS</b>	
6.3.1 Setup phase . . . . .	322
6.3.2 Run monitoring . . . . .	327
6.3.3 Validation and exploitation . . . . .	329
6.3.4 Recommendations to new CFD users . . . . .	331
6.4 Conclusions and perspectives . . . . .	333
<b>7 Emerging methods</b>	<b>343</b>
7.1 Introduction: why should you read this chapter? . . . . .	343
7.2 Present problems and (future) solutions . . . . .	344
7.3 The no-model approach: Direct Numerical Simulation . . . . .	346
7.4 Developing, testing, and calibrating models . . . . .	355
7.5 Solving computational limitations . . . . .	360
7.6 Advanced and alternative numerical techniques . . . . .	366
7.7 Uncertainty Quantification . . . . .	370
7.8 Conclusions . . . . .	371
